

VOICEWORKS Seminars

SPEAK WITH A VOICE THAT SPEAKS FOR ITSELF

A powerful message needs to be carried by a powerful medium. And there is no medium potentially more powerful than the human voice. VOICEWORKS seminars serves as a road map for all professionals (managers, coaches, therapists, motivational speakers, teachers, actors, singers) who wish to use the immense power of the voice to their advantage.

The voice of any public speaker, be they manager, teacher, coach, therapist, actor, or student, is potentially one of the most potent tools they possess. And yet it often rests hidden, under-developed and under-valued.

It's the innate timbre of your voice is the fundamental element that distinguishes your speech from all others -- your sonic signature in the world, as unique as a fingerprint. The process of uncovering your authentic vocal timbre will not only distinguish you as a public speaker instantaneously, it will also enable you to also express your message with a full range of emotional color and power.

For everyone who works with their voices, the challenges are the same.
How can you...

- * Develop your voice in an authentic, individual way
- * Liberate yourself from self-consciousness and annoying vocal habits
- * Allow your voice to carry the full range of your emotional expression naturally and freely

LEARN HOW YOUR VOICE WORKS

Curiously, since we cannot hear ourselves as others hear us, we often obscure our authentic voices with a combination of unconscious factors that render them weak, and undercut the power of what we have to say. In a VOICEWORKS seminar, participants learn how the voice and body work together naturally in the act of communication. This understanding is more than intellectual, as the voice is a physical phenomenon.

The methodology employed in VOICEWORKS sets in motion a body/mind learning process with a series of simple synergistic actions that bring forth the unique character and color of *your* voice, in a healthy, natural way. The resulting changes are easily maintained thanks to the neuroplasticity of the brain.

During the VOICEWORKS seminar, each participant will have the opportunity to diagnose and eliminate any particular vocal tics and habits that interfere with his effective presentation. Finally, we will examine the difference between the spoken voice and the singing voice, and how to utilize to advantage the space in between the two for the most powerful emotional effect in a presentation.

The legendary psychiatrist Dr Milton Erickson often said to his patients...
"...and when you leave, my voice will go with you."

If the message is going to be carried by your words, then it will be *your* voice that accompanies your listeners.
